

PRO-DIALOG™ WS

WATER-COOLED 400 TO 1800 kW[®]
AQUA FORCE

Quality Management System Approval

30XW- 30XWH

Nominal cooling capacity 476-1764 kW
Nominal heating capacity 498-1872 kW

The 30XW liquid chillers are the premium solution for industrial and commercial applications where installers, consultants and building owners require optimal performances and maximum quality.

The 30XW liquid chillers are designed to meet current and future requirements in terms of energy efficiency, flexibility of use and compactness. They use the most reliable technologies available today:

- Twin-rotor screw compressors with a variable capacity valve
- Single refrigerant R-134a
- Touch-screen Pro-Dialog control system
- Flooded heat exchangers that are mechanically cleanable

To meet to all environmental and economic requirements, the 30XW is available in two efficiency classes:

- Standard-efficiency 30XW units that offer an optimised balance of technical and economical aspects, while at the same time boasting superior energy efficiency.
- High-efficiency 30XW-P units that offer unequalled energy efficiency to satisfy the most stringent demands of building owners wanting to reduce operating costs to the minimum.

The 30XW Aquaforce range is also split into two versions:

- 30XW for air conditioning and refrigeration applications
- 30XWH for heating applications

These two versions provide the following performances:

- High heating temperature, allowing the 30XWH Aquaforce to supply water with a condenser leaving water temperature of +63°C (option 150)
- Low temperature, allowing the 30XW Aquaforce to operate with an evaporator leaving glycol temperature down to -6°C (option 5) or -12°C (option 6).

Features and advantages

Superior operating economy

- Full load and part load energy efficiency that surpasses the industry average:
 - Eurovent energy efficiency class "A"
 - EER of up to 6.15 kW/kW (30XW-P)
 - ESEER of up to 8.0 kW/kW (30XW-P)
 - New twin-rotor screw compressor equipped with a high-efficiency motor and a variable capacity valve that permits exact matching of the cooling capacity to the load.
 - Flooded multi-pipe evaporator and condenser for increased heat exchange efficiency.
 - Electronic expansion device permitting operation at a lower condensing pressure and improved utilisation of the evaporator heat exchange surface.
 - Economizer system with electronic expansion device for increased cooling capacity (30XW-P).

Low operating sound levels

- Compressors
 - Silencers on the discharge line.
 - Silencers on the economiser return line.
 - Acoustic insulation on the components that are most subjected to radiated noise.

Easy and fast installation

- Compact design
 - The 30XW units are designed to offer the most compact dimensions on the market.
 - With a width of approximately 1 m up to 1500 kW the units can pass through standard door openings and only require minimum floor space in the plant room.
- Simplified electrical connections
 - Main disconnect switch with high trip capacity
 - Transformer to supply the integrated control circuit (400/24 V)
- Simplified hydronic connections
 - Victaulic connections on the evaporator and condenser
 - Practical reference marks for entering and leaving water connections
 - Possibility to reverse the heat exchanger water inlet and outlet at the factory
 - Possiblity to modify the number of heat exchanger passes
- Fast commissioning
 - Systematic factory operation test before shipment
 - Quick-test function for step-by-step verification of the instruments, expansion devices and compressors

Environmental care

- R-134a refrigerant
 - Refrigerant of the HFC group with zero ozone depletion potential
- Leak-tight refrigerant circuit
 - Reduction of leaks as no capillary tubes and flare connections are used
 - Verification of pressure transducers and temperature sensors without transferring refrigerant charge
 - Discharge line shut-off valve and liquid line service valve for simplified maintenance.

Absolute reliability

- Screw compressors
 - Industrial-type screw compressors with oversized bearings and motor cooled by suction gas.
 - All compressor components are easily accessible on site minimising down-time.
 - Protection increased by an electronic board.
- Refrigerant circuit
 - Two independent refrigerant circuits (from 1000 kW upwards); the second one automatically takes over, if the first one develops a fault, maintaining partial cooling under all circumstances.
- Evaporator
 - Electronic paddle-free flow switch. Auto-setting according to cooler size and fluid type.
- Auto-adaptive control
 - Control algorithm prevents excessive compressor cycling (Carrier patent)
 - Automatic compressor unloading in case of abnormally high condensing pressure.
- Exceptional endurance tests
 - Partnerships with specialised laboratories and use of limit simulation tools (finite element calculation) for the design of critical components.
 - Transport simulation test in the laboratory on a vibrating table and then on an endurance circuit (based on a military standard).

Pro-Dialog control

- Pro-Dialog combines intelligence with operating simplicity. The control constantly monitors all machine parameters and precisely manages the operation of compressors, electronic expansion devices and of the evaporator water pump for optimum energy efficiency.
- Energy management
 - Internal time schedule clock: controls chiller on/off times and operation at a second set-point
 - Set-point reset based on the return water temperature
 - Master/slave control of two chillers operating in parallel with operating time equalisation and automatic change-over in case of a unit fault.
- Ease-of-use
 - User interface with large touch screen (120 x 99 mm) for intuitive access to the operating parameters. The information is in clear text and can be displayed in local language (please contact your distributor).

Remote management (standard)

The 30XW is equipped with an RS485 serial port that offers multiple remote control, monitoring and diagnostic possibilities. Carrier offers a vast choice of control products, specially designed to control, manage and supervise the operation of an air conditioning system. Please consult your Carrier representative for more information.

The 30XW also communicates with other building management systems via optional communication gateways.

A connection terminal allows remote control of the 30XW by wired cable:

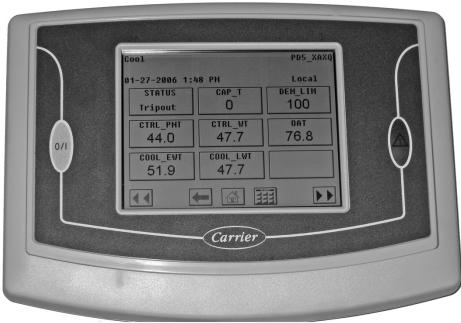

- Start/stop: opening of this contact will shut down the unit
- Dual set-point: closing of this contact activates a second set-point (example: unoccupied mode)
- Demand limit: closing of this contact limits the maximum chiller capacity to a predefined value
- Operation indication: this volt-free contact indicates that the chiller is operating (cooling load) or that it is ready to operate (no cooling load)
- Alert indication: this volt-free contact indicates the necessity to carry out a maintenance operation or the presence of a minor fault
- Alarm indication: this volt-free contact indicates the presence of a major fault that has led to the shut-down of one or several refrigerant circuits

Remote management (EMM option)

The Energy Management Module offers extended remote control possibilities:

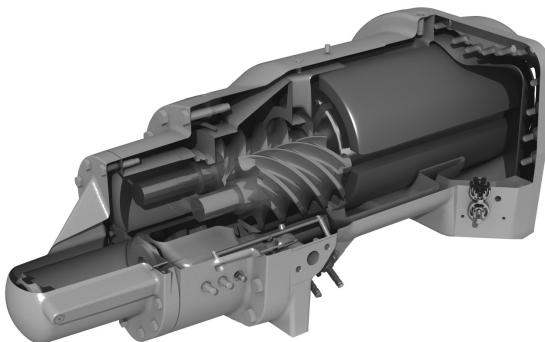

- Room temperature: permits set-point reset based on the building indoor air temperature (with Carrier thermostat)
- Set point reset: ensures reset of the cooling set-point based on a 4-20 mA or 0-10 V signal
- Demand limit: permits limitation of the maximum chiller power or current based on a 0-10 V signal
- Demand limit 1 and 2: closing of these contacts limits the maximum chiller power or current to two predefined values
- User safety: this contact can be used for any customer safety loop; opening of the contact generates a specific alarm
- Ice storage end: when ice storage has finished, this input permits return to the second set-point (unoccupied mode)
- Time schedule override: closing of this contact cancels the time schedule effects
- Out of service: this signal indicates that the chiller is completely out of service
- Chiller capacity: this analogue output (0-10 V) gives an immediate indication of the chiller capacity

Pro-Dialog operator interface with touch-screen

The 30XW operator interface is very user-friendly. It is a large-format touch-screen, and the information is easily accessible: clear text in the selected language allows consultation of all operating parameters. Up to eight screens can be personalised.

New generation 06T screw compressor

The new generation of the Carrier 06T screw compressors benefits from Carrier's long experience in the development of twin-rotor screw compressors. The compressor is equipped with bearings with oversized rollers, oil pressure lubricated for reliable and durable operation, even at maximum load.

A variable control valve controlled by the oil pressure permits infinitely variable capacity.

Among the other advantages: if a fault occurs e.g. if the condenser is fouled or at very high water temperature, the compressor does not switch off, but continues operation with a reduced capacity (unloaded mode).

The silencer in the discharge line considerably reduces discharge gas pulsations for much quieter operation.

The condenser includes an oil separator that minimises the amount of oil in circulation in the refrigerant circuit and re-directs it to the compressor function.

Part load performances

With the rapid increase in energy costs and the care about environmental impacts of electricity production, power consumption of air conditioning equipment has become an important topic. The energy efficiency of a liquid chiller at full load is rarely representative of the actual performance of the units, as on average a chiller works less than 5% of the time at full load.

IPLV (in accordance with ARI 550/590-98)

The IPLV (integrated part load value) allows evaluation of the average energy efficiency based on four operating conditions defined by the ARI (American Refrigeration Institute). The IPLV is the average weighted value of the energy efficiency ratios (EER) at different operating conditions, weighted by the operating time.

IPLV (integrated part load value)

| Load % | Condenser entering water temperature, °C | Energy efficiency | Operating time, % |
|--------|------------------------------------------|-------------------|-------------------|
| 100 | 35 | EER ₁ | 1 |
| 75 | 26.7 | EER ₂ | 42 |
| 50 | 18.3 | EER ₃ | 45 |
| 25 | 12.8 | EER ₄ | 12 |

$$\text{IPLV} = \text{EER}_1 \times 1\% + \text{EER}_2 \times 42\% + \text{EER}_3 \times 45\% + \text{EER}_4 \times 12\%$$

The heat load of a building depends on many factors, such as the outside air temperature, the exposure to the sun and its occupation.

Consequently it is preferable to use the average energy efficiency, calculated at several operating points that are representative for the unit utilisation.

ESEER (in accordance with EUROVENT)

The ESEER (European seasonal energy efficiency ratio) permits evaluation of the average energy efficiency at part load, based on four operating conditions defined by Eurovent. The ESEER is the average value of energy efficiency ratios (EER) at different operating conditions, weighted by the operating time.

ESEER (European seasonal energy efficiency ratio)

| Load % | Condenser entering water temperature, °C | Energy efficiency | Operating time, % |
|--------|------------------------------------------|-------------------|-------------------|
| 100 | 30 | EER ₁ | 3 |
| 75 | 26 | EER ₂ | 33 |
| 50 | 22 | EER ₃ | 41 |
| 25 | 18 | EER ₄ | 23 |

$$\text{ESEER} = \text{EER}_1 \times 3\% + \text{EER}_2 \times 33\% + \text{EER}_3 \times 41\% + \text{EER}_4 \times 23\%$$

Main options and accessories

| Options | No. | Description | Advantages | Use |
|--------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------|
| Medium-temperature brine solution | 5 | Medium-temperature glycol solution production down to -6°C | Covers specific applications such as ice storage and industrial processes | Only for: 30XW 0512, 0562, 1012, 1152 |
| Low-temperature brine solution | 6 | Low-temperature glycol solution production down to -12°C | Covers specific applications such as ice storage and industrial processes | As above |
| Unit supplied in two assembled parts | 51 | Unit supplied in two assembled parts. The unit is equipped with flanges that allow disassembly of the unit on site. | Facilitates installation in plant rooms with limited access | Only for: 30XW 1312, 1462 30XW 1612-1762 |
| No disconnect switch/no short-circuit protection | 70E | Unit without disconnect switch and no short-circuit protection device supplied with the unit | Permits an external electrical disconnect system for the unit (to be field-supplied). | 30XW 452-1762 |
| Single power connection point | 81 | Power connection of the unit via one main supply connection | Quick and easy installation | 30XW 1002-1762 |
| No disconnect switch/but with short-circuit protection | 82A | Unit without disconnect switch, but with short-circuit protection device | Permits an external electrical disconnect system for the unit (to be field-supplied). Short-circuit protection of the unit remains. | 30XW 452-1762 |
| Evaporator pump electrical power/control circuit | 84 | Unit equipped with an electrical power/control circuit for single evaporator pumps | Quick and easy installation | 30XW 452-1252 |
| Dual evaporator pump electrical power/control circuit | 84D | Unit equipped with an electrical power/control circuit for dual evaporator pumps | Quick and easy installation | 30XW 452-1252 |
| Condenser pump electrical power/control circuit | 84R | Unit equipped with an electrical power/control circuit for single condenser pumps | Quick and easy installation | 30XW 452-1252 |
| Service valve set | 92 | Valve set consisting of liquid line valve (evaporator inlet), economiser return line valve and compressor suction line valve to isolate the various refrigerant circuit components. | Simplified service and maintenance | 30XW 452-1762 |
| Condenser insulation | 86 | Thermal condenser insulation | Allows configuration with special installation criteria (hot parts insulated). | 30XW 452-602 30XW 1002-1162 |
| Evaporator with one pass | 100C | Evaporator with one pass on the water-side. Evaporator inlet and outlet on opposite sides. | Quick and easy installation. Reduced evaporator pressure losses. | 30XW 452-1762 |
| Condenser with one pass | 102C | Condenser with one pass on the water-side. Condenser inlet and outlet on opposite sides. | Quick and easy installation. Reduced condenser pressure losses. | 30XW 1002-1762 |
| 21 bar evaporator | 104 | Reinforced evaporator for extension of the maximum water-side service pressure to 21 bar | Covers applications with a high water column (high buildings) | 30XW 452-1762 |
| 21 bar condenser | 104A | Reinforced condenser for extension of the maximum water-side service pressure to 21 bar | Covers applications with a high water column (high buildings) | 30XW 452-1762 |
| Reversed evaporator water connections | 107 | Evaporator with reversed water inlet/outlet | Simplification of the water piping | 30XW 452-1762 |
| Reversed condenser water connections | 107A | Condenser with reversed water inlet/outlet | Simplification of the water piping | 30XW 452-1762 |
| JBus gateway | 148B | Two-directional communications board, complies with JBus protocol | Easy connection by communication bus to a building management system | 30XW 452-1762 |
| BacNet gateway | 148C | Two-directional communications board, complies with BacNet protocol | Easy connection by communication bus to a building management system | 30XW 452-1762 |
| LON gateway | 148D | Two-directional communications board, complies with LON protocol | Easy connection by communication bus to a building management system | 30XW 452-1762 |
| High condensing temperature | 150 | Increased condenser leaving water temperature up to 63°C. To ensure control of the condenser leaving water temperature, this option must be fitted for 30XWH units (but not for 30XW units). | Allows applications with high condensing temperature (for heat reclaim or dry cooler applications) | 30XW 452-602 30XW 1002-1162 |
| Condensing temperature limitation | 150B | Limitation of the maximum condenser leaving water temperature to 45°C. Modification on the unit name plate to reflect the reduced power input and current values. | Avoids oversizing of the protection elements and the power cables. | 30XW 452-1762 |
| Control for low condensing temperature systems | 152 | Output signal (0-10 V) to control the condenser water inlet valve. | Used for applications with cold water at the condenser inlet (well water). In this case the valve controls the water entering temperature to maintain an acceptable condensing pressure. | 30XW 452-1762 |
| Energy Management Module EMM | 156 | Remote control module. Additional contacts for an extension of the unit control functions. | Easy connection by wired connection to a building management system | 30XW 452-1762 |
| Code compliance for Switzerland | 197 | Additional tests on the water heat exchangers. Supply of PED documents, dimensional drawings and test certificates. | Conformance with Swiss regulations | 30XW 452-1762 |
| Code compliance for Australia | 200 | Heat exchanger approved in accordance with the Australian code. | Conformance with Australian regulations | 30XW 452-1762 |
| Options | Description | Advantages | Use | |
| CCN JBus gateway | See option 148B | See option 148B | 30XW 452-1762 | |
| CCN BacNet gateway | See option 148C | See option 148C | 30XW 452-1762 | |
| CCN LON Talk gateway | See option 148D | See option 148D | 30XW 452-1762 | |
| Energy Management Module EMM | See option 156 | Easy connection by wired connection to a building management system | 30XW 452-1762 | |
| Lead-lag kit | Supplementary water outlet temperature sensor kit, field-installed, allows master/slave operation of two chillers connected in parallel. | Optimised operation of two chillers connected in parallel with operating time balancing. | 30XW 452-1762 | |
| Water connection kit for welded connections | Victaulic piping connections with welded joints. | Easy installation | 30XW 452-1762 | |
| Water connection kit for flanged connections | Victaulic piping connections with flanged joints. | Easy installation | 30XW 452-1762 | |

* Instantaneous start-up current (maximum operating current of the smallest compressor(s) + locked rotor current or reduced start-up current of the largest compressor). Values obtained at standard Eurovent unit operating conditions: evaporator entering/leaving water temperature = 12°C/7°C, condenser entering/leaving water temperature = 30°C/35°C.

** Instantaneous start-up current (maximum operating current of the smallest compressor(s) + locked rotor current or reduced start-up current of the largest compressor). Values obtained at operation with maximum unit power input.

*** Values obtained at standard Eurovent unit operating conditions: evaporator entering/leaving water temperature = 12°C/7°C, condenser entering/leaving water temperature = 30°C/35°C

**** Values obtained at operation with maximum unit power input.

† Values obtained at operation with maximum unit power input. Values given on the unit name plate.

* Standard Eurovent conditions, cooling: evaporator entering/leaving water temperature = 12°C/7°C, condenser entering/leaving water temperature = 30°C/35°C.

** Standard Eurovent conditions, heating: condenser entering/leaving water temperature = 40°C/45°C, evaporator entering water temperature 10°C with the same flow rate as for Eurovent conditions in cooling mode.

*** Conditions in cooling and heating mode: evaporator entering/leaving water temperature = 10°C/7°C, condenser entering/leaving water temperature = 50°C/60°C.

**** 10⁻¹² W in accordance with ISO 9614-1

Notes, electrical data and operating conditions 30XW

- As standard 30XW 452 to 862 units have a single power connection point located immediately upstream of the main disconnect switch. 30XW 1002 to 1762 units have two connection points located immediately upstream of the main disconnect switches.
- The control box includes the following standard features:
 - One main disconnect switch per circuit*
 - Starter and motor protection devices for each compressor
 - Anti-short cycle protection devices**
 - Control devices
- Field connections: All connections to the system and the electrical installations must be in full accordance with all applicable codes.
- The Carrier 30XW units are designed and built to ensure conformance with local codes. The recommendations of European standard EN 60204-1 (corresponds to IEC 60204-1) (machine safety - electrical machine components - part 1: general regulations) are specifically taken into account, when designing the electrical equipment.
- The absence of power supply disconnect switch(es) and short-cycle protection devices in options 82A and 70E is an important factor that has to be taken into consideration at the installation site. Units equipped with one of these two options are supplied with a declaration of incorporation, as required by the machinery directive.

Notes:

- Generally the recommendations of IEC 60364 are accepted as compliance with the requirements of the installation directives. Conformance with EN 60204-1 is the best means of ensuring compliance with the Machines Directive and § 1.5.1.
- Annex B of EN 60204-1 describes the electrical characteristics used for the operation of the machines.

1. The operating environment for the 30XW units is specified below:

- Environment*** Environment as classified in EN 60721 (corresponds to IEC 60721):
 - indoor installation
 - ambient temperature range: minimum temperature +5°C to +42°C, class AA4
 - altitude: lower than or equal to 2000 m
 - presence of water: class AD2 (possibility of water droplets)
 - presence of hard solids, class 4S2 (no significant dust present)
 - presence of corrosive and polluting substances, class 4C2 (negligible)

2. Power supply frequency variation: ± 2 Hz.

3. The neutral (N) line must not be connected directly to the unit (if necessary use a transformer).

4. Overcurrent protection of the power supply conductors is not provided with the unit.

5. The factory installed disconnect switch(es)/circuit breaker(s) is (are) of a type suitable for power interruption in accordance with EN 60947-3 (corresponds to IEC 60947-3).

6. The units are designed for connection to TN networks (IEC 60364). For IT networks the earth connection must not be at the network earth. Provide a local earth, consult competent local organisations to complete the electrical installation.

NOTE: If particular aspects of an actual installation do not conform to the conditions described above, or if there are other conditions which should be considered, always contact your local Carrier representative.

* Not provided for units equipped with options 70E and 82A

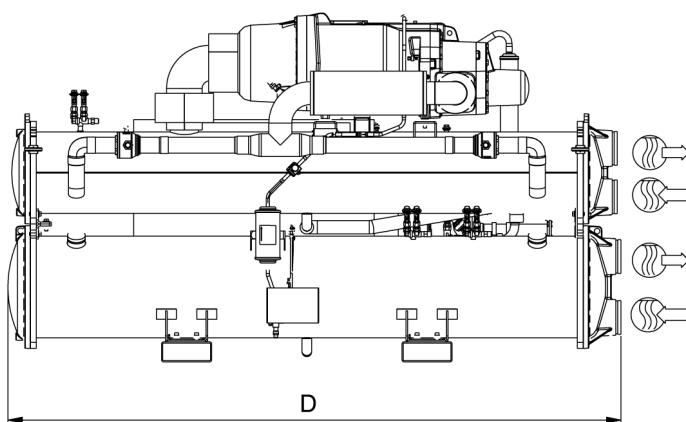

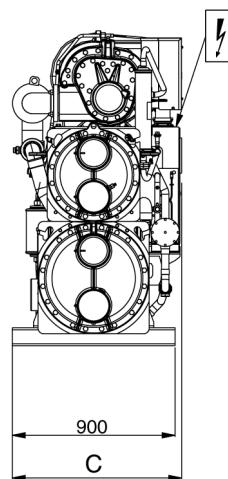

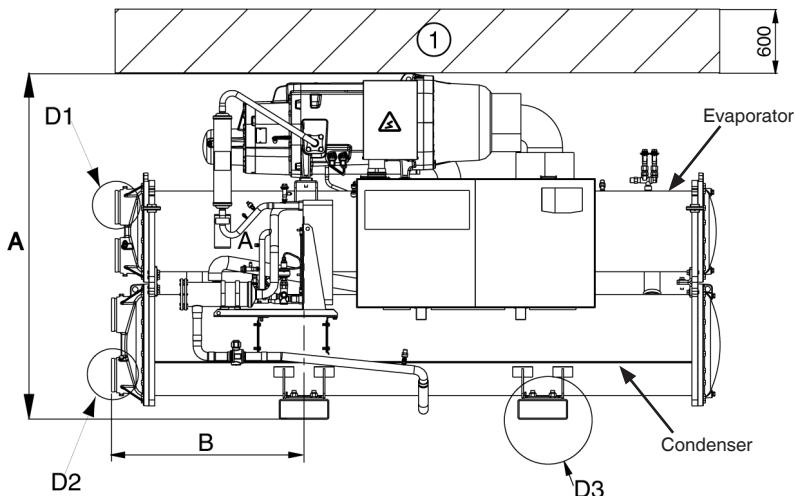

** Not provided for units equipped with option 70E

*** The required protection level for this class is IP21BW (according to reference document IEC 60529). All 30XW units are protected to IP23C and fulfil this protection condition.

| Evaporator | | |
| Entering temperature at start-up | - | 35.0°C |
| Leaving temperature during operation | 3.3°C* | 20.0°C |
| Entering/leaving temperature difference at full load | 2.8 K | 11.1 K |
| Condenser | | |
| Entering temperature at start-up | 13.0°C** | - |
| Leaving temperature during operation | 19.0°C** | 50.0°C*** |
| Entering/leaving temperature difference at full load | 2.8 K | 11.1 K |

* For low-temperature applications, where the leaving water temperature is below 3.3°C, a frost protection solution must be used. Please refer to option 5 and option 6.

** For lower condenser temperatures, a water flow control valve must be used at the condenser (two or three-way valve). Please refer to option 152 to ensure the correct condensing temperature.

*** Please refer to option 150 for applications with a high condenser leaving temperature (up to 63°C).

Standard units

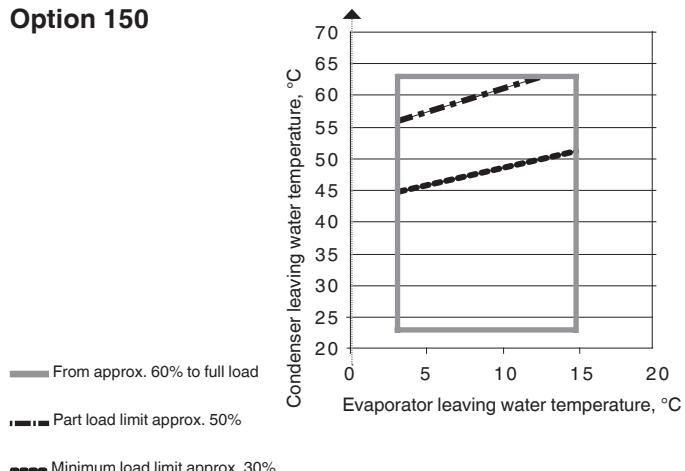

| Units with option 150 30XW-/30XWH-/30XW-P/30XWHP | Minimum | Maximum |
|------------------------------------------------------|----------|---------|
| Evaporator | | |
| Entering temperature at start-up | - | 35.0°C |
| Leaving temperature during operation | 3.3°C* | 15.0°C |
| Entering/leaving temperature difference at full load | 2.8 K | 11.1 K |
| Condenser | | |
| Entering temperature at start-up | 13.0°C** | - |
| Leaving temperature during operation | 23.0°C** | 63.0°C |
| Entering/leaving temperature difference at full load | 2.8 K | 11.1 K |

* For low-temperature applications, where the leaving water temperature is below 3.3°C, a frost protection solution must be used. Please refer to option 5 and option 6.

** For lower condenser temperatures, a water flow control valve must be used at the condenser (two or three-way valve). Please refer to option 152 to ensure the correct condensing temperature.

Option 150

| Units with options 5 and 6 30XW-/30XWH-/30XW-P/30XWHP | Minimum | Maximum |
|----------------------------------------------------------|---------------|---------------------|
| Evaporator | | |
| Entering temperature at start-up | - | 35.0°C |
| Leaving temperature during operation* | - | 35.0°C |
| (EG 5) Option 5 with ethylene glycol | -6°C | 15.0°C |
| (PG 5) Option 5 with propylene glycol | -3°C | 15.0°C |
| (EG 6) Option 6 with ethylene glycol | -12°C | 15.0°C |
| (PG 6) Option 6 with propylene glycol | -8°C | 15.0°C |
| Entering/leaving temperature difference at full load | 2.8 K | 11.1 K*** |
| Condenser | | |
| Entering temperature at start-up | 13.0°C** | - |
| Leaving temperature during operation | 19.0/23.0°C** | 55.0/ 63.0°C**** |
| Entering/leaving temperature difference at full load | 2.8 K | 11.1 K |

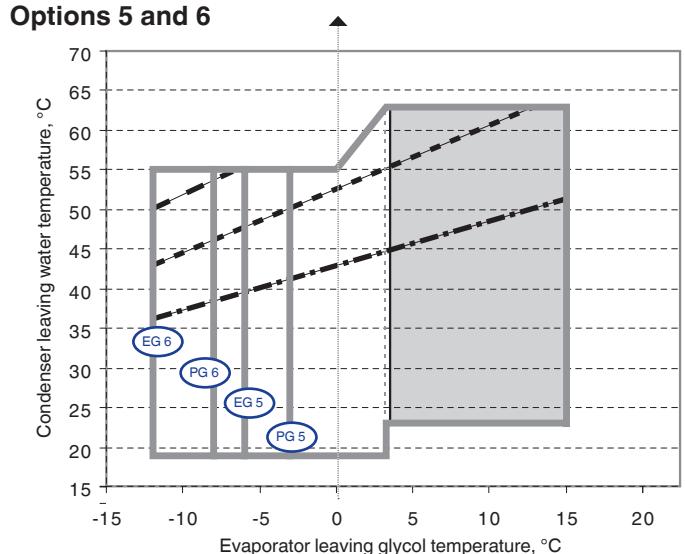

* The operating range with evaporator leaving temperatures above 3°C is permitted, but the performances are not optimised.

** For lower condenser temperatures, a water flow control valve must be installed at the condenser (two-way or three-way). Please refer to option 152 to ensure the correct condensing temperature.

*** Please refer to chapter 10.5 of the installation manual for the minimum recommended evaporator glycol flow rate.

**** Depends on the conditions at the evaporator and the load conditions.

Options 5 and 6

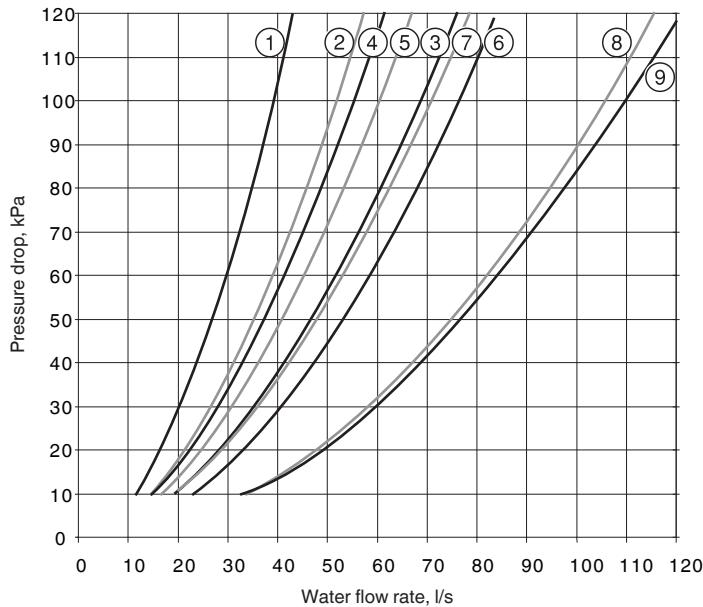

- Operating range permitted, but performances are not optimised
- Full load with option 5/6 and ethylene or propylene glycol
- - - Part load limit approx. 80%
- - - - Part load limit approx. 50%
- - - - - Part load limit approx. 30%

Note: Ambient temperatures: During storage and transport of the 30XW units (including by container) the minimum and maximum permissible temperatures are -20°C and 72°C (and 65°C for option 200).

Legend:

Qc kW Cooling capacity
Qh kW Heating capacity
Unit kW Unit power input (compressors, control)
Cool l/s Evaporator water flow rate
Cool kPa Evaporator pressure drop

Application data:

Standard units, refrigerant R-134a
 Evaporator water temperature rise: 5 K
 Evaporator fluid: chilled water
 Fouling factor: $0.18 \times 10^{-4} (\text{m}^2 \text{K})/\text{W}$

Performances in accordance with EN 14511

Order No. 13457-20, 10.2009. Supersedes order No. 13457-20, 01.2009.
 Manufacturer reserves the right to change any product specifications without notice.
